

INVESTIGATE:

- Step 1:** Determine all the exact values of the sides for the right triangle that point A forms on the circle.
Step 2: Determine the principal angle, related acute angle and the three primary trig ratios for the principle angle.
Step 3: Reflect point A horizontally about the y - axis and form a right triangle. Label the point S.
Step 4: Determine the principal, related acute angle and the three primary trig ratios for the principle angle using calculator.
Step 5: Reflect point S vertically about the x - axis and form a right triangle. Label the point T.
Step 6: Determine the principal, related acute angle and the three primary trig ratios for the principle angle using calculator.
Step 7: Reflect point T horizontally about the y - axis and form a right triangle. Label the point C.
Step 8: Determine the principal, related acute angle the three primary trig ratios for the principle angle using calculator.

Angles	Quadrant	Sine Ratio	Cosine Ratio	Tangent Ratio	GRAPH
POINT A principal \angle <u>60°</u> related acute \angle —	1 θ	$\sin \theta = \sqrt{3}/2$ $\sin \theta \approx 0.8660$ \oplus	$\cos \theta = 1/2$ $\cos \theta = 0.5$ \oplus	$\tan \theta = \sqrt{3}/1$ $\tan \theta \approx 1.7321$ \oplus	$x^2 = 2^2 - 1^2$ $x^2 = 3$ $x = \sqrt{3}$ $\cos^{-1}(0.5) = \theta$ $\theta = 60^\circ$
POINT S principal \angle <u>180-60 = 120</u> related acute \angle <u>60</u>	2 $180 - \theta$	$\sin(180 - 60) = \sqrt{3}/2$ $\sin 120 \approx 0.8660$ \oplus $\sin(180 - 60) = \sin 60$	$\cos(180 - 60) = -1/2$ $\cos 120 = -0.5$ $\cos 120 = -\cos 60$	$\tan(180 - 60) = -\sqrt{3}/1$ $\tan 120 \approx -1.7321$ $\tan 120 = -\tan 60$	
POINT T principal \angle <u>180+60</u> related acute \angle <u>60</u>	3 $180 + \theta$	$\sin(180 + 60) = -\sqrt{3}/2$ $\sin(240) \approx -0.8660$ — $\sin(180 + 60) = -\sin 60$	$\cos(180 + 60) = -1/2$ $\cos(240) = -0.5$ — $\cos(180 + 60) = -\cos 60$	$\tan(180 + 60) = -\sqrt{3}/-1$ $\tan(240) \approx 1.7321$ \oplus $\tan(180 + 60) = \tan 60$	
POINT C principal \angle <u>360-60</u> related acute \angle <u>60</u>	4 $360 - \theta$	$\sin(360 - 60) = -\sqrt{3}/2$ $\sin(300) \approx -0.8660$ — $\sin(360 - 60) = -\sin 60$	$\cos(360 - 60) = 1/2$ $\cos(300) = 0.5$ \oplus $\cos(360 - 60) = \cos 60$	$\tan(360 - 60) = -\sqrt{3}/1$ $\tan(300) \approx -1.7321$ — $\tan(360 - 60) = -\tan 60$	

PRACTICE:

HINT: Determine in which quadrants the given ratio could have the same sign.

Solve each of the following for $0 \leq \theta \leq 360^\circ$.

a) $\sin \theta = 0.4226$

$\sin^{-1}(0.4226) = \theta$

$\theta = 25^\circ$

OR

$180 - \theta = 180 - 25 = 155^\circ$

\therefore The angles are 25° or 155°

c) $\cot \theta = 8.1516$

$\frac{1}{\tan \theta} = \frac{8.1516}{1}$ flip each side

$\tan \theta = \frac{1}{8.1516} \approx 0.1227$

$\tan^{-1}(0.1227) = \theta$

$\theta = 7^\circ$

OR

$180 + 7 = 187^\circ$

\therefore The angles are 7° or 187°

e) $\sin \theta = 0.4815$

$\sin^{-1}(0.4815) = \theta$

$\theta = 29^\circ$

OR $180 - 29 = 151^\circ$

\therefore The angles are 29° or 151°

g) $\cos \theta = -0.8722$

$\cos^{-1}(-0.8722) = \theta$

$\theta = 151^\circ$

OR $180 + 29 = 209$

\therefore The angles are 151° or 209°

i) $\cos \theta = 0.6951$

$\cos^{-1}(0.6951) = \theta$

$\theta = 46^\circ$

OR

$360 - 46 = 314^\circ$

\therefore The angles are 46° and 314°

Method 1

$\cos(0.3420) = \theta$

ref angle $\theta = 70^\circ$

first angle is 110°

second angle is $180 + 70 = 250^\circ$

tells us where to reflect

CHECK
 $\cos 110^\circ$
 $\cos 250^\circ$

d) $\csc \theta = -2.3424$

$\frac{1}{\sin \theta} = \frac{-2.3424}{1}$ flip both sides

$\sin \theta = -0.4269$

$\sin^{-1}(0.4269) = \theta$

$\theta = 25^\circ = 335^\circ$

OR $180 + 25 = 205^\circ$ \therefore The Ls are 205° or 335°

Method 2

f) $\tan \theta = -0.1623$

$\tan^{-1}(-0.1623) = \theta$

$\theta = -9^\circ$

$\theta = 351^\circ$

OR $180 - 9 = 171^\circ$

\therefore The Ls are 171° or 351°

h) $\sin \theta = -0.3154$

$\sin^{-1}(-0.3154) = \theta$

$\theta = 18^\circ$

$\theta = 342^\circ$

OR $180 + 18 = 198^\circ$

\therefore The angles are 198° or 342°

j) $\sin \theta = -0.3154$
